

COURSE OUTLINE

(1) GENERAL

SCHOOL	SCHOOL OF SCIENCES		
ACADEMIC UNIT	PHYSICS DEPARTMENT		
LEVEL OF STUDIES	GRADUATE		
COURSE CODE	305	SEMESTER	7
COURSE TITLE	CONCEPTUAL PHYSICS AND TEACHING EXPERIENCE IN PHYSICS		
INDEPENDENT TEACHING ACTIVITIES <i>if credits are awarded for separate components of the course, e.g. lectures, laboratory exercises, etc. If the credits are awarded for the whole of the course, give the weekly teaching hours and the total credits</i>		WEEKLY TEACHING HOURS	CREDITS
		4	5
<i>Add rows if necessary. The organisation of teaching and the teaching methods used are described in detail at (d).</i>			
COURSE TYPE <i>general background, special background, specialised general knowledge, skills development</i>	General background, skills development		
PREREQUISITE COURSES:			
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek		
IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes		
COURSE WEBSITE (URL)			

(2) LEARNING OUTCOMES

<p>Learning outcomes</p> <p><i>The course learning outcomes, specific knowledge, skills and competences of an appropriate level, which the students will acquire with the successful completion of the course are described.</i></p> <p><i>Consult Appendix A</i></p> <ul style="list-style-type: none"> • <i>Description of the level of learning outcomes for each qualifications cycle, according to the Qualifications Framework of the European Higher Education Area</i> • <i>Descriptors for Levels 6, 7 & 8 of the European Qualifications Framework for Lifelong Learning and Appendix B</i> • <i>Guidelines for writing Learning Outcomes</i>
<p>It is expected that at the completion of the course, the students:</p> <ul style="list-style-type: none"> • Will have gained knowledge in the popularization and teaching of the basic concepts of Physics such as: Mechanics-Newton Laws-Momentum-Energy-Gravity, Matter Properties, Heat, Sound-Oscillations-Waves, Electromagnetism, Nuclear-Particle Physics and Relativity. • Be able to develop physics experiments on education (special didactic experiments) and experimental presentation of natural phenomena. • Will be able to present work-based experiments using new technologies to groups of first-year students or to groups of secondary school students. • Will have completed their practice in teaching either by teaching in secondary education institutions or by teaching in the Department's Demonstration Experiment Room to visiting students.
General Competences

Taking into consideration the general competences that the degree-holder must acquire (as these appear in the Diploma Supplement and appear below), at which of the following does the course aim?

Search for, analysis and synthesis of data and information, with the use of the necessary technology
 Adapting to new situations
 Decision-making
 Working independently
 Team work
 Working in an international environment
 Working in an interdisciplinary environment
 Production of new research ideas

Project planning and management
 Respect for difference and multiculturalism
 Respect for the natural environment
 Showing social, professional and ethical responsibility and sensitivity to gender issues
 Criticism and self-criticism
 Production of free, creative and inductive thinking

 Others...

Working independently
 Production of free, creative and inductive thinking
 Exercise in the popularization of difficult to understand scientific concepts

(3) SYLLABUS

Physical Sciences. Scientific method. Theory-Experiment. Concepts of Physics: Mechanics-Newton Laws-Momentum-Energy-Body movement-Gravity-Nature of matter. Properties of matter: solids, liquids, gases and plasma, temperature-dilation. Heat: propagation, phase change, thermodynamics. Sound: oscillations, waves-sound-musical sound. Electricity and Magnetism: electrostatics, electric current, magnetism, induction. Light: property, color, reflection, refraction, light waves, emission-light motion-light quantum. Atomic-Nuclear-Particle Physics: the atom and the quantum, nucleus and radioactivity, fission and fusion, nuclear interactions, basic structure of matter, accelerators and detectors. Relativity: special theory of relativity, general theory of relativity. Experimentation of students and practical training in teaching using new technologies. Practical training with experiments on education (special didactic experiments), presentation of experiments to groups of first year students and groups of secondary school students.

(4) TEACHING and LEARNING METHODS - EVALUATION

DELIVERY <i>Face-to-face, Distance learning, etc.</i>	Face-to-face learning	
USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY <i>Use of ICT in teaching, laboratory education, communication with students</i>	Use of ICT in teaching Use of e-course system for lecture slides and information about the course.	
TEACHING METHODS <i>The manner and methods of teaching are described in detail. Lectures, seminars, laboratory practice, fieldwork, study and analysis of bibliography, tutorials, placements, clinical practice, art workshop, interactive teaching, educational visits, project, essay writing, artistic creativity, etc. The student's study hours for each learning activity are given as well as the hours of non-directed study according to the principles of the ECTS</i>	Activity	Semester workload
	Lectures	40
	Bibliography study	32
	Preparation of the project	50
	Project presentation - exams	3
Total	125	

<p style="text-align: center;">STUDENT PERFORMANCE EVALUATION</p> <p><i>Description of the evaluation procedure</i></p> <p><i>Language of evaluation, methods of evaluation, summative or conclusive, multiple choice questionnaires, short-answer questions, open-ended questions, problem solving, written work, essay/report, oral examination, public presentation, laboratory work, clinical examination of patient, art interpretation, other</i></p> <p><i>Specifically-defined evaluation criteria are given, and if and where they are accessible to students.</i></p>	<p>Tests during the courses.</p> <p>Teaching physics in groups of first-year students and groups of secondary school students.</p>
--	--

(5) ATTACHED BIBLIOGRAPHY

<p><i>- Suggested bibliography:</i></p> <p><i>- Related academic journals:</i></p> <ul style="list-style-type: none"> • HEWITTG. PAUL, ΟΙ ΕΝΝΟΙΕΣ ΤΗΣ ΦΥΣΙΚΗΣ, Πανεπιστημιακές Εκδόσεις Κρήτης 2009. • B. Crowell, Conceptual Physics, https://reader.bookfusion.com/books/146998-conceptual-physics.
